

Changes

Feedback received:

- You have a Lamport class but it's not used.

I updated my Lamport class file and included it in my server and client files.

Feedback received:

- Is the Aggregation Server persistent? No
- Is restore on failure implemented? No

The Aggregation Server is able to backup and load the backup of feeds if it dies earlier. The first test case should demonstrate it.

Feedback received:

- Is testing comprehensive? Almost
- Feedback: You have 2 tests so you are on the right track.

I added more test cases. Now there is 6 test cases in my test bash script (test.sh) The test cases tests the files on different scenarios.
